

Post Protector

Post Protector is honored to receive a Gold Key of Excellence Award again and humbly thanks the customers for recognizing this company as an industry leader.

“Customer satisfaction is my number one goal,” says Ken McDonnell, president, “and I hope that the service I provide is proof of that.”

Post Protector is an effective slide-on “barrier system” for both solid sawn and laminated posts. It addresses post longevity concerns by eliminating “soil to wood” and “concrete to wood” contact while utilizing the structural integrity of having the post in the ground.

This 5-foot product is lightweight, flexible and strong. It is made of a material that has 400-plus years of geo-application life. A series of horizontal perimeter ribs, in conjunction with provided hardware, yields substantial post uplift protection.

Environmentally, the chemical treatment stays in the post and there is no risk of chemical contamination of soil or ground water.

Post Protector is the simple, sensible complement to post-frame construction.
