

GOLD KEY AWARDS

Post Protector

Post Protector is honored to be the recipient of a 2008 Gold Key of Excellence Award and humbly thanks its customers for recognizing the company as an industry leader.

Post Protector believes its customers are the best (no kidding) and that they provide the motivation that makes the company want to deliver superior service.

Post Protector is an effective, slide-on “barrier system” for both solid sawn and laminated posts.

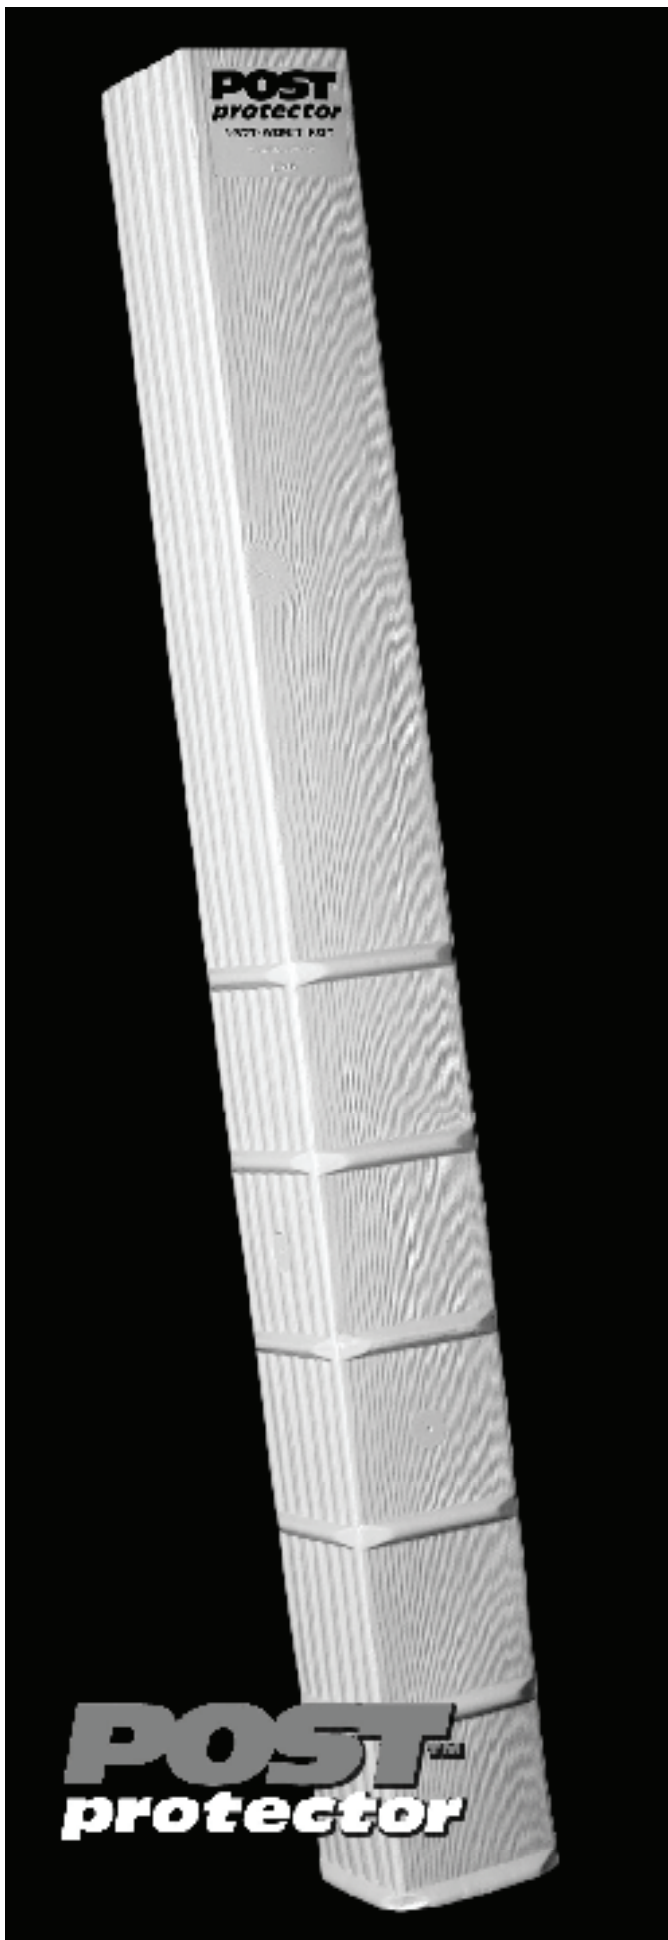

It addresses post longevity concerns by eliminating “soil to wood” and “concrete to wood” contact while utilizing the structural integrity of having the post in the ground.

This 5-foot product is lightweight, flexible and strong. It is made of a material that has 400-plus years of geo-application life!

A series of horizontal, perimeter ribs, in conjunction with provided hardware, yield substantial post uplift protection.

Environmentally, the chemical treatment stays in the post and there is no risk of chemical contamination of soil or groundwater.

Post Protector. The simple, sensible complement to post-frame construction. ■
