

# POST-FRAME ADVANTAGE HANDBOOK

FIRST EDITION

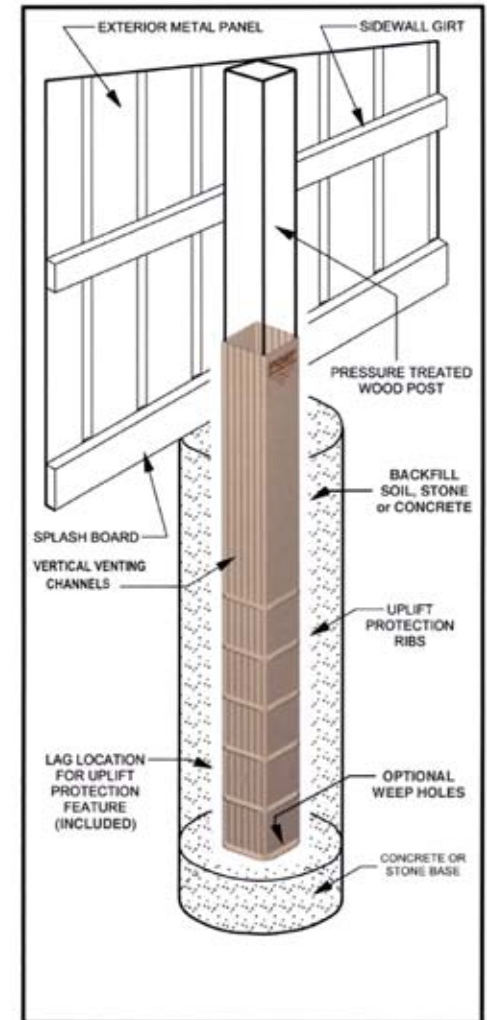

*Strong • Efficient • Appealing*

## POST-FRAME FOUNDATION OPTIONS

**Post Protector for enhanced protection of copper-based chemical-treated wood posts or laminated columns.**

- Provides moisture and insect protection from footer to above finished floor grade
- Molded to provide post uplift protection
- Allows for safe concrete post encasement
- Prevents chemical leaching from treated posts into soil or ground water
- Post venting system allows the post to breathe
- Simple slide-on installation and framing-friendly design
- Strong yet pliable and light-weight
- Easy to ship, store and handle
- Attractive coloring and wood grain texture

## CASE STUDY POST PROTECTOR - PLASTIC BARRIER SYSTEM

Post Protectors were chosen to enhance the protection of wood posts for this \$2 Million commercial building project.

Above is an artist's depiction and photo of work underway on a state-of-the-art, \$2 million, 15, 000 square foot commercial facility for Talbot County Soil Conservation Service in Easton, Maryland. The building consists of six suites and is occupied by state and federal agencies.

“For this and many projects, the Post Protector is a tool that promotes consumer confidence” says builder Joe Kramer. “It’s a sensible ,effective and affordable solution to address post longevity concerns. We believe Post Protector to be the perfect compliment to post-frame construction”
