

WHAT IS POST DECAY?

Post decay occurs when certain conditions exist (moisture saturation of wood fiber, oxygen, and temperature range of 40° to 100° F) which enable the living micro-organisms, abundant in soil, to colonize the post using the wood fiber as their food source.

Post Protector is a "Barrier System" that eliminates soil contact and the ability for the destructive micro-organisms to access the post.

POSTING IMPRESSIVE BENEFITS ...

- ✔ "Landfill Liner" material has 450 years of geo-application life.
- ✔ Unsurpassed moisture & insect protection.
- ✔ Integral post uplift protection.
- ✔ Allows for safe concrete post encasement (if desired).
- ✔ Weed wacker proof
- ✔ Environmentally safe — prevents chemical leaching from pressure-treated posts into soil or ground water.
- ✔ Simple slide - on installation.
- ✔ Strong yet pliable & lightweight.
- ✔ Post in ground delivers superior structural strength vs. a post bolted to a bracket above grade.
- ✔ Easy to ship/store/handle.
- ✔ Attractive appearance.
- ✔ Varied post hole depths are no problem! Simply trim to a uniform height above finished floor.
- ✔ Save time & money vs. concrete pier & bracket system - set posts, backfill & frame all in the same day!
